What is QLabel

QLabel class is used for displaying messages, also you can use QLabel class for displaying images, there are different methods that you can use in QLabel class, for example we have setText() and it is used for setting the text, we have setPixmap() method and that is used for setting the image in the QLabel, there are the important methods for QLabel class.

- setText(): This method is used for setting the text in the QLabel class
- setPixmap(): This method is used for setting pixmap, an instance of the QPixmap class, to the Label widget
- setNum(): This method adds an integer or double value to the Label widget

- `clear()`: This method clears text from the Label widget
- `setMovie()`: This method is used for setting a gif image in the QLabel
